Chapter 3

Page 170

Review Questions and Exercises

1, 2, 3, 6, 8, 10, 19, 25, 28, 35

1. `length = 9, breadth = 0.5`
2. A) `cin >> description;`
 B) `getline(cin, description);`
3. `iostream` and `iomanip`
6. C
8. `unitsEach = static_cast<double>(qty) / salesRep;`
10. `x += 5;`
 `total += subtotal;`

 `dist /= rep;`

 `ppl *= period;`

 `inv -= shrinkage;`

 `num %= 2;`
19. `rand()`
25. *Display "Enter the customer's maximum amount of credit: ".*

 Read maxCredit.

 Display "Enter the amount of credit the customer has used: ".

 Read creditUsed.

 $availableCredit = maxCredit - creditUsed.$

Display "The customer's available credit is \$".

Display availableCredit.

```
#include <iostream>

using namespace std;

int main()
{
    double maxCredit, creditUsed, availableCredit;

    cout << "Enter the customer's maximum amount of credit: ";
    cin >> maxCredit;

    cout << "Enter the amount of credit used by the customer: ";
    cin >> creditUsed;

    availableCredit = maxCredit - creditUsed;

    cout << "The customer's available credit is $";

    cout << availableCredit << endl;

    return 0;
}
```

28. `#include <iostream>` is missing.
Each `cin` and `cout` statement starts with capital C.

The `<<` operator is mistakenly used with `cin`.

The assignment statement should read:

```
sum = number1 + number2;
```

The last statement should have `<<` after `cout`.

The last statement is missing a semicolon.

35. 6 6.5 0

Input the number of hours you have used GPS: 0.2
Input the number of hours you have used WiFi: 1
Input the number of hours you have used the display: 1
You have used 578.6 mA, which is 19.2867% of a battery of 3000 mA

Process exited after 108.2 seconds with return value 0 (15.62 ms cpu time, 3956 KB mem used).
