

HW 6

2. A parameter is the variable listed in the function definition; An argument is the actual value passed to the function when called
3. parameter variables are defined inside the parentheses of a function header or prototype
5. Yes, as the order of parameters listed.
8. Static local variable retains its value between function calls, making it useful for keeping state
12. prototype ; definition
13. main
15. value
34. `double final_velocity = velocity(10.0, 50.5, 100);`
38. T
41. T
59. value & should be value

Programming challenges

```
5. 10  #include <iostream>
    11  #include <iomanip>
    12  using namespace std;
    13  const float g = 9.8;
    14
    15  double fallingDistance(int time)
    16  {
    17      return 0.5 * g * time * time;
    18  }
    19
    20  int main()
    21  {
    22      for (int i = 1; i <= 10; i++)
    23      {
    24          cout << fallingDistance(i) << endl;
    25      }
    26  }
```

```
