

C++ Homework 9

Chapter 11

Review Questions and Exercises

2, 3, 7, 11, 12, 18, 19, 30, 34, 46, 47, 50, 51

2. No.

3. The elements of an array must all be of the same data type. The members of a structure may be of different data types.

7. A) "Canton"
B) "Haywood"
C) 9478
D) uninitialized

11. declared

12. a structure variable

18. `const int SIZE = 25;`

```
    Car carArray[SIZE];
```

19. `const int SIZE = 35;`

```
    Car forSale[SIZE] = {  
        {"Ford", "Taurus", 1997, 21000},  
        {"Honda", "Accord", 1992, 11000},  
        {"Lamborghini", "Countach", 1997, 200000} };
```

30. T

34. T

46. Initialization of the member variables cannot be done in the structure definition. Missing ; after closing brace.

47. No structure variable has been declared. `TwoVals` is the structure tag.

50. An initializer cannot be skipped before the end of the initialization list.

51. No structure variable has been declared. `TwoVals` is the structure tag.

Programming Challenges (please submit your C++ source code file, as well as a screenshot of the program output)
